

Seneca Premium Guide

GIVING YOU ACCESS TO ALL PREMIUM COURSES
FOLLOWING THE NATIONAL CURRICULUM

Seneca Premium contains additional courses and features to help you boost your exam grades!

Premium gives you access to 800+ Premium only courses, Premium learning modes, and Assignments containing AI-marked exam questions
This is on top of the 600+ free exam board specific courses.

Premium courses include:

- Predicted Papers
- HyperLearning
- HyperFlashcards
- Premium Knowledge
- Night Before Courses
- Hardest Questions & University entry.

Premium Features: Smart Learning Mode, Wrong Answer Mode, AI-marked Exam Questions.

Your teachers can now set you Exam question only assignments for extra revision to help you boost your grades!

The screenshot shows the Seneca user interface for Biology: AQA GCSE Higher. The left sidebar contains navigation links: Overview, Exam Prep (2), Assignments (2), and Ask Amelia. Below these are icons for a document (circled in purple), a close button, and a lightning bolt. A list of topics follows: 1 Cell Biology, 2 Organisation, 3 Infection & Response, 4 Bioenergetics, 5 Homeostasis & Response, 6 Inheritance, Variation & Evolution, and Ecology. The main content area displays the course title, a user profile picture, and three performance metrics: 897 XP, 250 Questions answered, and 17min 52s Learning time. Below this is the 'Next section' 1.1.2 Properties of Prokaryotes with a 'Continue learning' button (circled in purple). The 'Revision recommendations' section lists topics with their respective XP and question counts: 4.1.4 Photosynthesis Experiments (3 wrong answers, ~30XP), 1.1.1 Types of Cells (2 exam questions, ~45XP), 5.4.1 Plant Hormones (3 wrong answers, ~30XP), and 4.1.1 Photosynthesis (9 exam questions, ~175XP).

Wrong answers 23

Sections with wrong answers

- 4.2.1 Respiration 10
- 1.1.1 Types of Cells 4
- 4.1.1 Photosynthesis 3
- 4.1.4 Photosynthesis Experiments 3
- 5.4.1 Plant Hormones 3

Bioenergetics > Respiration > Respiration

Good afternoon, Danielle!

Which of these does not involve the body's metabolism?

0 / 1

Converting glucose into starch ✖

Breaking down proteins into urea

Retina changing size in response to light ✔

Metabolism is the sum of all the chemical reactions that happen in an organism.

🗣️ Feedback?

0 / 1

Premium students benefit from new learning modes: click on the 'X' to see your wrong answers.

Smart learning 8

Boost your memory strength with our smart algorithm's suggestions

- 5.4.1 Plant Hormones
- 1.1.29 Exam-Style Questions - Cell Structure & Microscopy
- 4.1.5 Grade 9 - Photosynthesis Experiment
- 4.1.6 Exam-Style Questions - Rate of Photosynthesis
- 4.2.1 Respiration
- 1.1.1 Types of Cells

(1,000 g) bag of sugar. We then take this bag and place it on some scales. The scales say the bag of sugar weighs 1 kg, so we would say the scales are accurate.

- If the scales said the bag of sugar weighed 750 g, the scales would be inaccurate.

- **Reliability:** Reliability refers to the ability of an experiment to produce consistent results. For example, let's say we weigh the same 1 kg bag of sugar on a different set of scales. On the first weigh, the scales say the sugar weighs 750.5 g. On the second weigh, the scales say the bag of sugar weighs 750.5 g.

- These scales are reliable as they produce the same result each time.

- However, they are not accurate as the bag of sugar actually weighs 1 kg (the scales are **reliable** but **inaccurate**).

- **Validity:** Validity is how appropriate an experimental method is at achieving the aim of an experiment. For example, a valid method for measuring the weight of a bag of sugar is using a set of scales.

- Using a thermometer to measure the weight of the bag of sugar would not be a valid experimental method (...surprisingly).

Seneca has a Smart Learning Algorithm, this Premium learning mode will look at your individual abilities and guide your revision to ensure you learn as quickly and efficiently as possible. Click the lightning bolt to use this mode.
